

Below are a few links for news on human attributions of climate change. The sudden "surge" in news interest may be the result of several recent reports:

- 1) NOAA's U.S. Climate States for June (<http://www.ncdc.noaa.gov/sotc/national/2012/6>)
- 2) Two reports in the Bulletin of the American Meteorological Society (BAMS):
State of the Climate in 2011 report, which provides a detailed peer-reviewed update on global climate indicators and notable weather events from last year.

"Explaining Extreme Events of 2011 from a Climate Perspective" provides a more in-depth analysis about possible linkages between climate change and some of the more prominent extreme weather and climate events experienced last year
http://www.noaanews.noaa.gov/stories2012/20120710_stateoftheclimatereport.html
- 3) For additional visuals, visit: <http://www.climatewatch.noaa.gov/article/2012/state-of-the-climate-in-2011-highlights>
- 4) Also, on July 16, the Global Climate Stats for June will be released at: <http://www.ncdc.noaa.gov/sotc/global/>
